

Light Spot Sketcher

This is a sketching device that can create light spot effect without a camera or a brush.

How to play:

- Push the first button and hold. Position your figure at where you want the spot to be. A dot will appear. Try to move your figure around while pushing the bottom. Many small dots will appear as you move.
- Push the second button and hold. Position your figure at where you want the spot to be. The longer you hold the bottom, the bigger the circle grows.
- Push the third button to clear the art board.
- Turn the long stick around to try different colors.

Hope you enjoy!
